Frozen supervised peers
Models from peer clients
Target benign training observations
Fit local anchor and expert bank
Peer evidence to response expert
Peer-wise calibration
Target-relative evidence
Per-peer thresholds; union
Protected anchor
Combine anomaly scores
Calibrate anchor decision
Heterogeneous bank
Detector / rarity / response
Calibrate expert union
Final decision: peer union OR anchor OR expert-bank union
No final recalibration
Benign reference: score transforms | Calibration: blockwise shared peer multiplier
